Database change

Sqitch

Ronan
Dunklau

The problem

Overview

Solutions

Sqitch:
overview

Practical
sqitch

Different kind of changes:

- Database Schema changes (DDL statements)

```
ALTER TABLE sometable ADD COLUMN somecolumn VARCHAR
```

- Static data changes (DML statements)

```
INSERT INTO vat_rates (vat_code, vat_country, timespan)
    values ('BTW', 'BE', '[2012-01-01,infinity)')::daterange
```

- Procedures, Triggers, Extensions...

```
CREATE OR REPLACE FUNCTION increment(integer) RETURNS integer as $$%
    select $1 + 1;
$$ LANGUAGE sql;
```

Common problems

Sqitch

Ronan
Dunklau

The problem

Overview

Solutions

Sqitch:
overview

Practical
sqitch

- **Current state of the db** What should I deploy to be up-to-date ?
- **Versioning** How can I store the different revisions ?
- **Concurrent work** How can I merge my work with my colleagues ?
- **Revert** Is there a way to revert to a previous state ?

Domain-Specific-Languages (DSLs)

- Examples: Liquibase, Rails migrations, Django south, SQLAlchemy's alembic...
- Often tied to a language/framework
- "Opinionated" about what you can and should do

Changes

Sqitch

Ronan
Dunklau

The problem

Sqitch:
overview

Goals

Concepts

Practical
sqitch

Changes

- Named transition from a state A to a state B, along with the reverse transition.
- Uniquely identified (think of git commit hash)
- Defines "dependencies" and "conflicts" with other changes (optional)
- Actually defines three scripts:
 - deploy
 - revert
 - verify

Status

Sqitch

Ronan
Dunklau

The problem

Sqitch:
overview

Goals

Concepts

Practical
sqitch

Status

- Current database status
- Defined by the set of applied change

Example

```
user@machine% sqitch status
# On database sqitchtest
# Project: sqitch-tuto
# Change: 0694e414dc474004803c150df5ffd61b672b47e6
# Name: change_pass
# Deployed: 2013-01-29 08:38:21 +0100
# By: Ronan Dunklau <ronan.dunklau@kozea.fr>
#
Nothing to deploy (up-to-date)
```
